Education

Master of Science in Applied Computer Science
California State University, Fullerton
December 2027 (expected)

Bachelor of Science in Computer Science, Minor in Mathematics
California State University, Fullerton
December 2025

Experience

Spacetime Engineering (Lyntris), Los Angeles, CA

RF Test Technician (Jun 2026 - Present)

- Write report generator program that offers 10x performance improvement and additional features over previous solution.
- Create macros and other tools to control Vector Network Analyzers via VISA protocol.
- Test, tune, and assemble large ground antenna components (e.g., diplexers, OMTs, waveguides).

acm@CSUF, Fullerton, CA

Open Source Team Officer, Open Source Team Lead, FullyHacks Web Lead (Jan 2025 - Present)

- Write and maintain club's applications, CI pipelines, cloud infra, and technical documentation.
- Teach others how to contribute and cultivate a growing open-source community on campus.
- Design and lead workshops on industry-standard technologies (e.g., Advanced Git, Rust, GitHub Actions, REST APIs).
- Lead developer for acmcsuf.com's data layer and cloud infrastructure for web-based applications.
- Web team lead for FullyHacks, CSUF's yearly hackathon with 400+ attendees.

theCoderSchool, Torrance, CA

Code Coach (Mar 2026 - Present)

- Work 1-on-1 and 1-on-2 with K-12 students to create projects with Unity, Python, JavaScript, Scratch, and other technologies.
- Teach technical skills and programming, as well as soft skills for software development.
- Configure DNS records and Cloudflare security policies to offer free production domains to advanced students.

Technical Skills

Languages: Python, C++, C, Go, Java, Typescript, Lua, bash, SQL, PowerShell, HTML/CSS
Technologies: Gin, FastAPI, Django, Next.js, React, Cloudflare, AWS, Terraform, Pandas, POSIX threads, systemd
Dev Tools: Nix/NixOS, Proxmox, Linux, Docker, Git, GitHub Actions, Vim

Projects

Spacetime Engineering Report Generator

Technologies: Python, Tkinter, Pandas, NumPy, lets-plot, multithreading
Role: Sole Developer

- Create user stories and translate into technical requirements to address problem of poor-performing internal tools.
- Implement GUI program for generating performance reports and plots for RF components.
- Write algorithms to compute worst-case values (e.g. axial ratio) from up to ~120k rows of frequency data.
- Implement plots generator for customer reports to replace previous arrangements of VNA screenshots.
- Maintain CI and CD pipeline and documentation to release tool to non-technical team.

api.acmcsuf.com

Repository: github.com/acmcsufoss/api.acmcsuf.com
Technologies: Go, Gin, SQLite, OpenAPI, Nix, GitHub Actions, Fly.io, Cobra
Role: Project co-leader & lead developer

- Lead developer of acm@CSUF's REST API that manages data for club of 2,500 members.
- Create tasks, delegate work, and write/review code for team of 7 core developers.
- Create & maintain CI/CD pipeline to speed up development cycle and reduce programming errors.
- Created reproducible development environment with Nix/direnv and wrote comprehensive technical docs, minimizing onboarding time.

Productivity App

Repository: github.com/tomasohchom/motion
Technologies: Go, Terraform, TypeScript, TanStack, React, MinIO, AWS, Docker
Role: Back-end developer & DevOps lead

- Led development of Go services for microservices architecture backend.
- Containerized services for eventual deployment to cloud using AWS Fargate.
- Wrote Terraform Infrastructure as Code (IaC) for reproducible deployments.
- Wrote integration and end-to-end tests for automated testing in CI pipeline.
